Ushbu maqolada bugungi kunda ta'limda tarbiya fanini o'qitishda o'quvchilarga ta'siri, tarbiya fanini o'qitish orqali shaxsning yetuklik, kamolot cho'qqilariga erishishida tarbiyaviy jarayonlarni tashkil yetishda manba sifatida rol o'ynashi haqida fikrlar keltirildi.

Kalit so'zlar: ta'lim, tarbiya, o'quvchi, kompetensiya, vaqt, natija, pedagog, oila, tarbiya fani, innovatsion fikrlash.

АННОТАЦИЯ

В данной статье приводятся мнения о влиянии преподавания науки на обучающихся в современном образовании, о роли образования как ресурса в организации образовательного процесса в достижении вершин зрелости и зрелости человека посредством обучения науке.

Ключевые слова: образование, воспитание, ученик, компетентность, время, результат, педагог, семья, педагогическая наука, инновационное мышление.

Education is a pedagogical process aimed at forming certain physical, mental, spiritual, moral and spiritual qualities in a person. Education is a set of measures used to ensure that a person has the characteristics necessary for living in society. Education is the most ancient and eternal value that ensures the humanity of a person. The concept of education has different meanings in different periods of the nation's history and society's development, and has been interpreted in different ways. After Uzbekistan gained independence, an approach based on a new healthy pedagogical thinking in the interpretation of education began to be decided. President of the Republic of

Uzbekistan Sh. In his address dated December 29, 2020, M. Mirziyoyev said, "As we have set ourselves the great goal of establishing the foundation of the Third Renaissance in our country, for this we need an environment that will educate the new Khorezmians, Berunis, Ibn Sinas, Ulugbeks, Navoi and Baburs." and we need to create the conditions. First of all, the development of education and training, the establishment of a healthy lifestyle, and the advancement of science and innovation should serve as the main pillars of our national idea," he said. "On the way to this goal, creating ample opportunities and providing comprehensive support for our young people to set big goals for themselves and achieve them is the most important task for all of us. Education is an activity aimed at bringing the young generation to adulthood, forming social consciousness and behavior in it, and is aimed at forming the mental, physical, moral, and spiritual qualities of a person, which is necessary to ensure that a person lives in society. It is a unique process of creating content. Education is aimed at forming a person, and develops on the basis of values that ensure the existence of a person and society.

The tasks of the science of education in education are as follows:

- ✓ to learn the level of education of the group of students and acquire the skill of educational influence on it;
- ✓ analysis of best practices and their creative use in their activities;
- ✓ monitoring the positive impact of educational work on the students' morale, further developing and improving it;
- ✓ he should constantly develop his knowledge to increase the effectiveness of educational work.

Discussion and results: There are instructive, advices, stories, national customs and traditions in the lives of our ancestors in the Hadith Sharifs, many opinions about ethics by great scholars, scientists, writers such as Beruni, Farobi, Ahmed Yassavi, Amir Temur, Navoi, Babur. - comments have an important educational value even today for family life, for every person. The influence of education science on young people's critical thinking helps to develop students' theoretical and practical discussion, expression, discussion and interpretation skills. This improves their thinking and expression skills and engages them in more transformative thinking and creation. Education science has a great impact on the outlook of young people, because it determines how young people look at their humanity, society, and outlook, what decisions they make, and what kind of character and legitimacy they form. Education helps to develop students in all aspects. In this respect, they are taught to make decisions, to discuss, to accept responsibility, and to build relationships that are firm, fair, and cooperative in social organizations. This is important in forming the skills necessary for their adaptation to society and its development. Education, by providing

young people with moral values, helped to shape them into better citizens, safer from its interests, vices and legitimacy. "The most valuable thing in life is time. Only a person who devotes his time to knowledge and education will not spend his time in vain." Ozdemir Asaf. The main criterion for educating young people is to guarantee respect and love for their country and homeland. "Continuous education of our youth in the spirit of patriotism I believe that one of the ongoing works is the introduction of educational science into the school process. Education is very important for us," said the President of the Republic of Uzbekistan Sh. M. Mirziyoyev.

It is well known to all of us that education is a virtue of a person. Education is needed everywhere. At home, on the street, at school, among friends, in public places, etc. The first center of education of a person is his family. In the family, parents educate their children as an example. The role of your mother is especially significant. Every parent should teach first of all how to greet and respect elders. Because it is not for nothing that our wise people say: "The beginning of speech is words, the beginning of manners is greetings." - he did not say for nothing. "The well-known pedagogue A.S. Makarenko noted that education up to the age of five is extremely important in the formation of a child's personality. He wrote about this: "...the main basis of education ends at the age of five, so you What you did before the age of 90 is 90% of the educational process, and further education continues on the basis of re-education. should pay more attention to his child, it is very important to be able to educate the child If you want your child to be a well-educated person, you will be aware of his studies and always keep in touch with the teacher. Only then can you expect good results from your child A parent who wants to learn does not put all the responsibility on the teacher, but always works together with the teacher. Parents should teach their children to respect the teacher, that the teacher is the second mother, and that the school is the second home. Only then will the child respect his teacher and remember everything he taught. This will help them apply what they have learned later in life. "Teachers are compared to rain. As rain awakens the vitality of every grain, the main goal of a teacher is to reveal the creative potential of each student." Drops of water fall to the thirsty ground, and young sprouts sprout from it. That is, students who are thirsty for knowledge are formed as people with a future. The teacher teaches children to live in life together with education. We can say that the teacher shows the black and white of life

no exaggeration either. We all know that patriotism is the moral basis of the life of every country and is the most important mobilizing force for the comprehensive development of society. That's why we must take concrete measures to strengthen our citizens' strong immunity against harm that is completely foreign to us and to strengthen their sense of responsibility for the fate of our country.

CONCLUSION

In conclusion, it should be said that for the development of the child, both the teacher and the parents, even the child himself, must work. Only then will there be growth, there will be results. The role of parents and school in raising a child is incomparable. Parents should pay attention to their child's upbringing and education. In order for society to progress, education must be effective. For effective education, parents should be knowledgeable. The main goal of the education organized in the Republic of Uzbekistan today is to educate a perfect person and bring him to adulthood. The result of education is the training of highly qualified personnel who meet high moral and ethical requirements. This process is two-fold, and requires organization and leadership, as well as the activity of the student himself. The pedagogue plays a leading role in this process. Because he understands the essence of the general goals of social education, is aware of the system of tasks to be carried out towards the goal, chooses educational forms, methods and tools in a reasonable, scientific way and applies them to the educational process. Educating every mature person is to provide him with consistent mental, ideological, political, moral, labor, aesthetic, physical, ecological, economic and legal education, the unity of activity to the mind and behavior of students, as well as the organization of the educational process. is an urgent issue.
